## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to as follow: fig. 1, 8 should be labeled as "A/D" and 11 should be labeled as "'D/A". Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Specification***

2. The disclosure is objected to because of the following informalities: page 7, line 14, "analog/digital" should be replaced by "digital/analog". Please provide copy of

French patent application referred to in page 13, line 32 and the document referred to in page 14, line 11.

Appropriate correction is required.

### ***Claim Objections***

3. Claims 1-14 are objected to because of the following informalities: each claim has be terminated by a period. In addition claim 1, line 6, "suitable" needs to be deleted; line 6, before "signal", "initial" needs to be inserted, for consistency with antecedent; line 10 recites "transformed signals (ki(t))" while the antecedent in line 8 only recites "transformed signals". Please correct for consistency. The same comment applies to similar limitation in line 15.

Claim 4, line 2, "suitable" needs to be deleted; line 2 recites "for eliminating a carrier signal of frequency f0". This is not consistent with recitation "lowering the central frequency", recited in claim 1. In other words, if the carrier frequency is eliminated (claim 4) how can it be lower as recited in claim 1?

Claim 11 does not recited the claim number. Was claim 1 intended? If so, amend the claim to refer to claim 1. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 101***

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. Claims 1-14 are rejected under 35 U.S.C. 101 as not falling within one of the four statutory categories of invention. Supreme Court precedent<sup>1</sup> and recent Federal Circuit decisions<sup>2</sup> indicate that a statutory "process" under 35 U.S.C. 101 must (1) be tied to another statutory category (such as a particular apparatus), or (2) transform underlying subject matter (such as an article or material) to a different state or thing. While the instant claim recites a series of steps or acts to be performed, the claim neither transforms underlying subject matter nor is positively tied to another statutory category that accomplishes the claimed method steps, and therefore does not qualify as a statutory process. For example the method including steps of a first transformation, second transformation and third transformation is of sufficient breadth that it would be reasonably interpreted as a series of steps completely performed mentally, verbally or without a machine. The claim fails to recite any corresponding hardware in combination with the method step(s) so as to effectively tie the process claim with a statutory class of invention, i.e. a specific apparatus.
